

What is claimed is:

1. A vehicle part mounting structure, comprising:
 - a panel constituting part of a vehicle body;
 - 5 a retainer mounted to a first side of the panel and having at least one female thread;
 - at least one bolt threadedly engaged with the female thread from a second side of the panel; and
 - 10 a part mounted to the second side of the panel with the bolt,
 - the retainer having a first end portion mounted to the first side of the panel by a fitting structure, and a second end portion mounted to a fixing area of the panel by spot welding,
 - 15 the fitting structure including a retainer receiving recess set back from the first side of the panel toward the retainer, a retainer inserting aperture opening from the retainer receiving recess toward the fixing area, and a fitting protrusion provided at the first end portion of the retainer, the fitting protrusion being inserted through the retainer inserting aperture and fitted into the retainer receiving recess.
2. A vehicle part mounting structure according to claim 1, wherein the retainer has
 - 20 a plastically deformable weak portion between the second end portion and the female thread.
3. A vehicle part mounting structure according to claim 1, wherein the mounted part comprises a striker.
